Abstract: The paper has in view to continue and develop the *human models* that lie at the basis of Informational Anthropology (Guja, 2008) and Individual's Anthropology (Guja, 1989), by placing the human being and society within the cosmic context in which it actually is and with which it coexists. It is important to underline *the effects of the Earth's continuous movement in space upon our everyday existence*. We attempted to answer questions with anthropological character, such as: *What is the process ensuring good transmission of fundamental sociocultural behaviours, the generic and genetic causative support of their historical continuity?* The field is studied by cultural anthropology and other sociocultural sciences and there is a great diversity of the debates depending on the work hypothesis we started from. In this paper I deal with the problem from the positions of Informational Anthropology, Biocosmology and modern Relativistic-Quantum Physics, starting from the hypothesis that *the fundamental causal factor that determined the good organization of anthropological processes in time is cyclicity and periodicity of the cosmic context which is reflected at the level of individual and collective conscience*.

Key words: anthropologic model, cosmic cyclicity, cyclic cultural interface

Introduction

The purpose of the paper is to continue and develop *human models* lying at the basis of Informational Anthropology (Guja, 2008), and Individual's Anthropology (Guja et al., 1989), by placing the human being and society within the cosmic context in which it actually lives and coexists. It is important to notice *the effects of the Earth's continuous movement upon our everyday existence*. The motivation is to include among the Anthropological fundamental modeling factors, analyzed today as the cause of evolution for the human society and culture, *the well known cosmic factors: our permanent movement in the space together with the Earth in the gravitational and electromagnetic field of the Solar* (Hawkings, 1988, Penrose, 1997) *and cosmic system* (Figure 1).
